Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • "Why is it taking so long to get my standard laptop configured?" • "We need a faster way to route orders to the hardware team."	**THINKS** • "Manual approval and task creation are slowing down IT operations." • "Automating with Flow Designer should eliminate these bottlenecks."
DOES • Submits standard laptop requests through the ServiceNow Service Catalog. • Follows up manually on pending approvals and task assignments.	**FEELS** • Frustrated by manual delays and lack of automated status updates. • Optimistic and relieved once ServiceNow Flow Designer streamlines fulfillment.
PERSONA NAME: IT Procurement Team Member / End User (Standard Laptop Requester)
