Team ID:	SWTID-2026-6274
Project Name:	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Date:	29-09-2026

Scalability & Future Plan

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations

S.No	Limitation	Priority
1	Manual task routing and notifications outside ServiceNow for non-standard hardware requests	Medium
2	Limited automated multi-tier management approvals for bulk laptop purchases exceeding budget thresholds	High
3	Absence of real-time inventory stock level verification before catalog submission	Medium

Scalability Plan

S.No	Scalability Aspect	Proposed Upgrade / Solution
1	User Load	Scale Flow Designer execution contexts to support simultaneous multi-departmental laptop procurement requests across enterprise branches.
2	Data Storage	Implement archived table partitioning in ServiceNow for historical RITM and Catalog Task records exceeding 12 months.
3	Performance	Optimize Flow trigger conditions and asynchronous subflows to minimize transaction response times during peak requisition windows.

4	Security	Enforce strict domain separation and role-based access controls (RBAC) restricted exclusively to IT hardware fulfillment groups.

Future Roadmap

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 2	Automated Inventory Stock Level Verification	Q4 2026	Prevents ordering backordered laptop configurations.
Phase 3	Multi-Tier Approval Matrix based on Cost Centers	Q1 2027	Streamlines financial sign-offs for high-value orders.
Phase 4	Integration with Asset Management & Auto-Provisioning	Q2 2027	Reduces manual hardware setup and deployment turnaround time.
