Project Title: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer	

Data Flow Diagram Overview:The Data Flow Diagram (DFD) illustrates how data moves through the automated standard laptop procurement system between external entities, processes, and data stores.

DFD Symbol Legend & Description

Symbol	Name	Description & Project Application
Oval / Rounded shape	External Entity	A person, organization, or system outside the project that sends or receives data (e.g., User/Requester, Approver, Hardware Team).
Rectangle with numbered header	Process	An activity that transforms incoming data into outgoing data (e.g., 1. Request Handling / Validate Request, 2. Fulfillment / Process Request, 3. Notification / Notify User).
Rectangle (solid fill)	Data Store	A place where data is held for later use (e.g., Request Datastore, ServiceNow Catalog Task [sc_task], Inventory Database).
Labeled arrow	Data Flow	The movement of data between entities, processes, and data stores, labeled with data passed (e.g., request submission, approval status, task assignment).

System Data Flow Diagram (Workflow Architecture)

Process Data Flow Description:

1. Request Submission: The User submits a Standard Laptop request through the ServiceNow Service Catalog. This sends request data to Process 1 (Request Handling).
2. Validation & Approval: Process 1 validates the request, creates the Request record, and routes it for managerial approval. Upon approval, request and customer information are stored in the Request Datastore.

3. Automated Task Creation via Flow Designer: Process 2 (Fulfillment) retrieves request details from the datastore and automatically generates a Catalog Task (sc_task) assigned to the Hardware group with the description 'Laptop need to Configured'.
4. Notification & Completion: Process 3 (Notification) updates the inventory, logs status records, and sends confirmation updates back to the User and notification alerts to the Hardware Team.
