Project Title: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer	

Define Functional and Non-Functional Requirements:Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority
1	Authentication	Users securely log in to the ServiceNow portal using enterprise single sign-on (SSO) or credentials.	High
2	Authorization levels	Defines user roles including Requester, Approver (Manager/Director), and Hardware Fulfillment Team with specific access permissions.	High
3	External interfaces	Integrates with ServiceNow notification engine for email alerts and corporate directory (LDAP/Azure AD) for user profiles.	Medium
4	Transactions processing	Handles service catalog request submission (REQ), requested item generation (RITM), and	High

		catalog task routing (SCTASK).	
5	Reporting	Generates real-time dashboards and reports tracking procurement status, fulfillment times, and department resource utilization.	Medium
6	Business rules, etc.	Automates flow execution via Flow Designer: upon request approval, automatically generates catalog task assigned to the Hardware group with updated short description.	High
7	Compliance to laws or regulations	Adheres to corporate IT asset management policies, data privacy guidelines, and secure audit logging standards.	High
8	Other	Provides self-service tracking interface for users to check order status, delivery dates, and configuration updates.	Low

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	System ensures rapid page loading and rapid flow execution for catalog submissions.	Page loads in < 2 seconds; flow triggers within 1 second.

2	Scalability	Platform scales smoothly to handle growing numbers of employees and concurrent IT procurement requests.	Supports up to 10,000 concurrent users without degradation.
3	Security & Data Privacy	Ensures role-based access control, secure data transmission, and encryption for sensitive employee and asset data.	End-to-end HTTPS/TLS encryption and role-based ACLs.
4	Reliability & Availability	High availability of the ServiceNow cloud infrastructure to ensure continuous IT procurement operations.	99.9% uptime per month.
5	Usability & Accessibility	Intuitive user interface adhering to modern accessibility and design standards for all employees.	Complies with WCAG 2.1 AA standards.
6	Other (Maintainability)	Modular design using Flow Designer subflows and catalog items for easy future modifications and maintenance.	Updates and modifications deployable via Update Sets.
