Project Title: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer	

Define Your Technology Stack:Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

S.No	Architecture Component/Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	ServiceNow Service Portal (HTML/CSS, AngularJS, Bootstrap)	Provides a responsive, user-friendly interface for employees and IT staff to submit and track standard laptop requests seamlessly.
2	Backend / Server-Side	ServiceNow Flow Designer & Workflow Engine (JavaScript / Rhino)	Enables robust, automated business logic execution, approval routing, and catalog task generation without complex manual coding.
3	Database / Data Storage	ServiceNow Relational Database (MySQL / MariaDB backend)	Securely stores system records, catalog items, request tables (sc_request), requested items (sc_req_item), and catalog tasks (sc_task) with strong relational mapping.
4	Cloud / Hosting /	ServiceNow Enterprise	Ensures high

	Deployment	Cloud (PaaS / SaaS)	availability, enterprise-grade scalability, automated backups, and secure multi-tenant cloud infrastructure.
5	Version Control & CI/CD	ServiceNow Studio, Update Sets, & Git Integration	Facilitates seamless application change management, version tracking, and migration across development, test, and production instances.
6	Third-Party APIs / Other Tools	ServiceNow Notification Engine & REST API	Enables automated email notifications to approvers and hardware teams, along with potential integration with external asset management systems.
